

Installing VXi Updater – Mac OS X

Installation

1. Download file `VXi_Firmware_Updater_V.100.x.x.pkg.zip`.
2. Navigate to the downloaded file, unzip and launch the package `VXi_Firmware_Updater_Vx.xx.x.pkg` to begin installation.
3. Once the installer opens, click **Continue** to begin the installation.
4. Agree to the terms of the License Agreement and continue through the installation steps.

5. When the application has installed, select **Close** to exit the installer. Restart your computer.

Setup Complete

VXI Updater is now installed on your computer. You can access it from the Dock.
