

BlueParrott M300-XT

What is BlueParrott Updater?

BlueParrott Updater is a free software program that enables you to easily update your headset firmware via USB. By downloading and installing the BlueParrott Updater on your computer, you ensure your BlueParrott headset always has the latest features and functions. As part of the installation process, you can choose to have the Updater automatically check for the latest firmware version on a weekly or monthly basis—or you can choose to check it manually if you prefer.
