

BlueParrott B650-XT

How do I reset my BlueParrott B/S650-XT to the default settings?

When you reset your B/S650-XT, previously paired devices will be cleared, and factory default settings will be restored. Follow these steps to reset.

1. Ensure your headset is powered on.
2. Press and hold both the **BlueParrott** button and **Volume down** button until the Multi-function (MFB) button flashes purple twice rapidly.
3. Your headset has now been reset and will automatically power off. When you power on your headset, the headset will automatically enter pairing mode.

Note

After resetting, you need to re-pair the headset with your smartphone. Remember to delete the previous pairing before you re-pair.
