## How do I ensure the best possible Bluetooth signal for my headset?

To get the best possible Bluetooth signal, follow these suggestions:

- Make sure the distance between your headset and the paired device does not exceed 33 feet (10 meters).
- Make sure there is a direct line of sight between your headset and smartphone. Avoid placing objects that can block radio signals, between paired devices. These include walls, doors, and windows.
- Avoid environments where computers, microwave ovens, and high concentration of Wi-Fi are present
- Keep your headset and smartphone on the same side of your body.
- Avoid placing your smartphone in a back pocket.
